WHAT DOES IT DO?

The Ove Glove Hot Surface Handler

No More Burns! No More Dropped Pans!

We've all lost grip of a sheet pan full of cookies fresh from the oven because the hot pad or oven mit we were using was just too big and bulky to get a good firm grip on the pan. Kitchen towels aren't much better as they often aren't thick enough or the right material to protect our hands from the

heat... let alone we usually end up dragging the corner of the towel into the food!

Ove Glove is the perfect solution!

- ◆ Comfortable five-fingered flexi-grip construction
- ◆ Fits both left or right hand
- ◆ Withstands extreme heat up to 480° F
- ◆ **The 'Ove' Glove™** exterior layer is made of DuPont Nomex® and Kevlar®*.
- ◆ Interior layer of soft doubleknit cotton.
- ◆ Machine washable.
- ◆ Perfect for the kitchen, barbeque, changing a

light bulb, or anywhere you need to get a sure grip on a hot object!

The thermal properties of **The 'Ove' Glove™** outer layer, which is made of Nomex® and Kevlar® dramatically extend the time you can handle a hot object in your hands. The tough exterior of this glove forms a thermal isolation barrier, slowing the temperature increase in the interior layer of soft Doubleknit cotton. When exposed to an open flame, the outer layer of the glove does not catch fire and does not melt.

Warning: This product extends the time to handle hot objects. It is **not** a permanent protection against fire or heat.

WHAT'S

INCLUDED?

• 1 Set of Ove Glove
